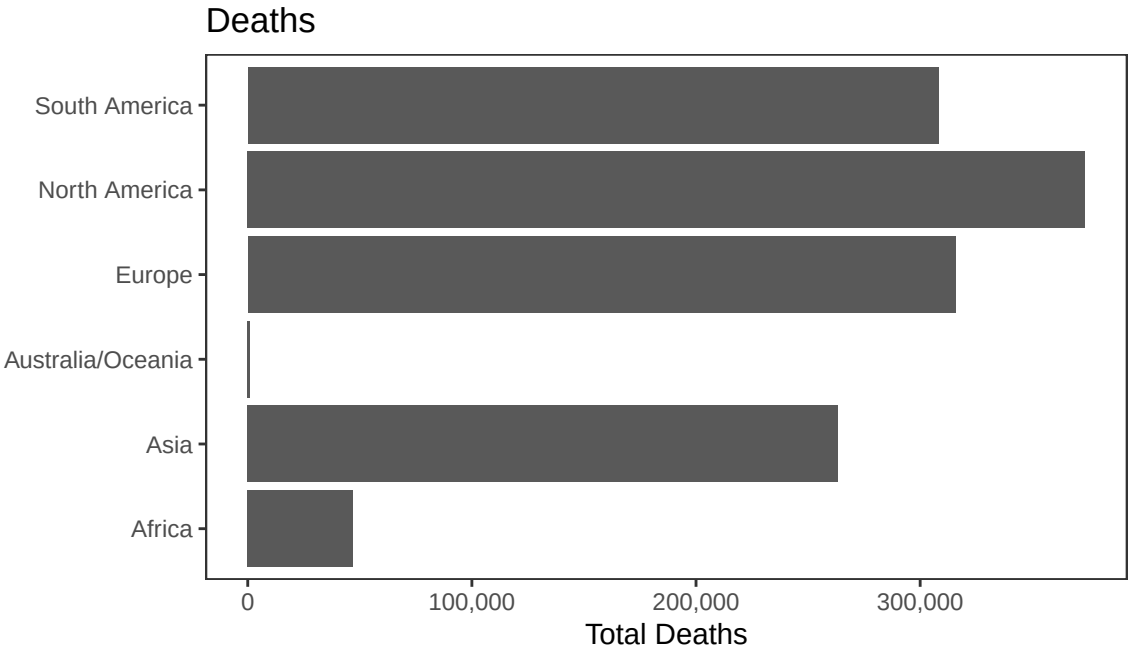
Erik's Covid-19 Chart Pack

Data updated 2020-11-14 08:16:37. World data are from Worldometers. National and state-level mortality, case, and testing data are from Johns-Hopkins University. County and city-level mortality and case data are from the New York Times. Most data presented in this report were accessed through APIs provided by The COVID Tracking Project and NovelCOVID API.

World Data

There have been 53,732,464 confirmed Covid-19 cases and 1,308,570 deaths worldwide.



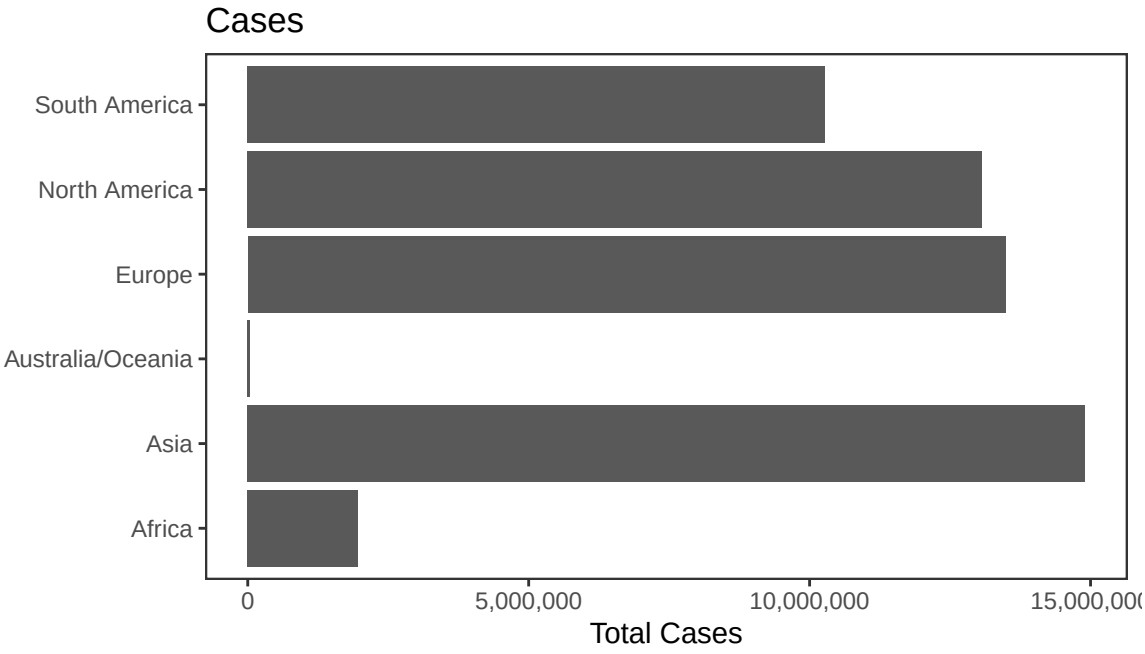


Table 1: Top Countries by Total Cases

Country	Cases	Deaths	New Cases	New Deaths
USA	11,064,364	249,975	183,527	1,395
India	8,773,243	129,225	45,343	539

2020-11-02	9,202,532	223,186	82,248	476
2020-11-01	9,120,284	222,710	74,051	391
2020-10-31	9,046,233	222,319	90,492	963

Deaths

Because the effects of the virus can take several weeks to manifest in patients, deaths are a lagging indicator of contagion, but they may be a more reliable than case counts, which are a function of both the prevalence of the disease and the rate of testing. The case mortality rate is a very crude indicator of lethality because a large numbers of non-lethal cases are likely never detected. A declining case mortality rate is indicative of more widespread testing.

Testing

Widespread testing is necessary for managing the spread of the disease. The following charts show how testing in the United States has changed over time. When the supply of available tests is limited, they are typically only used for patients whose symptoms suggest they are likely to have contracted the virus. A high positive test rate indicates that testing capacity is constrained.

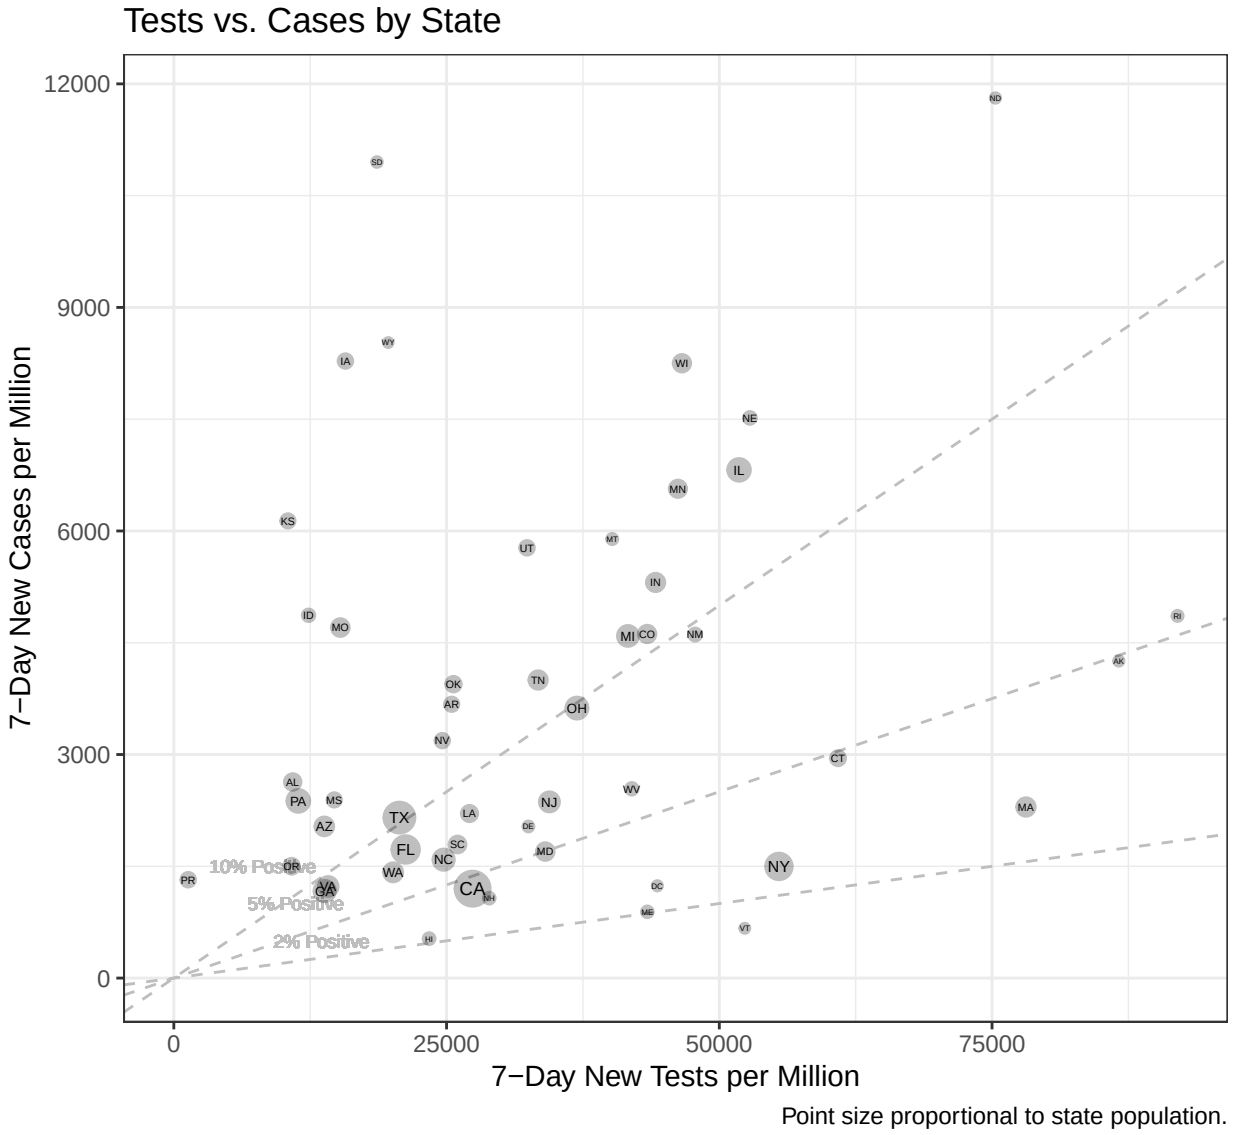
Interpretation of differences in case rates across states is complicated by the fact that those states that do more thorough testing will invariably uncover more cases. A lower positive test rate is an indication that a state is doing more comprehensive testing since, when testing is rationed, only those individuals who are more likely to test positive are typically tested. The following chart compares the one-week increase in detected cases to the the number of tests administered by each state relative to population. The states of greatest current concern are those with both a large increase in detected cases and a relatively small increase in tests. These states lie in the upper-left of the chart.



Local Data

The following charts and tables present mortality, case, and testing data for the Washington DC metropolitan area and adjacent states.
